

Functional Requirements

PocketSmart AI | Team ID 6aba1a835015c35b98635933 | Team Leader: Rohith S | Members: Heedhesh R, Ashwin S, Chandru T

ID	Category	Requirement	Priority	Status
FR-01	Navigation	Display the landing page and navigation to application pages.	High	Implemented
FR-02	Authentication	Register with username, email and password; log in to receive a 30-minute JWT stored in an HttpOnly cookie; bcrypt password hashing; passwords over 72 bytes rejected.	High	Implemented
FR-03	Authorization	Planner, history and profile endpoints require login; users can only read or clear their own recommendations.	High	Implemented
FR-04	Home planner	Accept budget, room types, style, platforms and preferences; return a category-wise plan.	High	Implemented
FR-05	Party planner	Accept budget, event type, guests, location, food preference and services; return a budget split.	High	Implemented
FR-06	Jewelry planner	Accept budget, occasion, types, metal, platforms and style; optional outfit image.	High	Implemented
FR-07	External interface	Use Google Gemini (gemini-2.5-flash, then gemini-2.0-flash) when GEMINI_API_KEY is set.	High	Implemented
FR-08	Business rules	Accept an AI plan only if allocations or prices stay within the budget; otherwise use the offline plan. Budget must be greater than 0 and at most Rs. 5 crore.	High	Implemented
FR-09	Reporting	Store each plan and show it in History; /api/history lists plans; DELETE clears them.	High	Implemented
FR-10	Compliance	Advisory only. No purchases or bookings. Outfit images are not stored.	Medium	Implemented
FR-11	UI	Present planners and history through Jinja2 templates.	Medium	Implemented

Acceptance Notes

AI output is unverified text. The app validates JSON shape and budget totals before showing it, but prices remain estimates and should be checked against current seller prices.
