

Non-Functional Requirements

PocketSmart AI | Team ID 6aba1a835015c35b98635933 | Team Leader: Rohith S | Members: Heedhesh R, Ashwin S, Chandru T

Category	Requirement
Usability	Clear labels, input constraints and actionable errors. Layout fits mobile width (checked at 390 px).
Performance	Non-AI pages respond without waiting on external services. AI latency depends on Gemini.
Reliability	Gemini errors never crash the server; an offline plan is returned instead.
Security	Secrets from environment variables, bcrypt hashes, signed JWTs, HttpOnly cookies, escaped output, image type, size and dimension checks.
Privacy	Images and preferences are used only for the requested plan. Images are not retained.
Maintainability	Routes split by feature (auth, home, party, jewelry). Dependencies listed in requirements.txt.
Portability	Runs on Windows, macOS and Linux with Python 3.10+.
Data durability	Users and history are stored in a SQLite file and survive restarts.
Responsible AI	Output is validated and labelled as an estimate. User text is treated as data, not instructions.
